

Test Plan Document

Component	Details
Objectives	The goal is to ensure the platform's end-to-end functionality performs as expected and meets usability standards across all user roles (Guest, Registered User, and Admin) Specific objectives include: • Verify that users can create accounts, log in, and manage their profiles without issues • Verify that products can be browsed, searched, and filtered correctly • Verify that the checkout and payment process completes successfully • Verify that coupons, discounts, and gift cards are applied correctly • Verify that admins can manage the store content and users without issues
Approach	The test strategy focuses on manual testing. • Manual testing will be used for usability, exploratory, and user experience testing.

Scope	In Scope: • User authentication • Admin dashboard with admin privileges • Product browsing and search • Cart and wishlist • Checkout and orders Out of Scope: • Live payment processing (simulation only in this phase) • Mobile application (web only)
---------------------	--

Test Deliverables	• Test cases for all features listed in scope • Bug reports • Final test summary report All deliverables will be shared in every sprint.
Dependencies	• The login system (email and Google) must be set up and working • The email service must be active to test password reset, 2FA, and invoice delivery • The payment simulation module must be available and running • The product catalog must be loaded with test data (72 products across 6 categories) • The database must include test accounts: at least one regular user and one admin • Backup plan: if any of the above are unavailable, the team will use dummy data and simulated responses to continue testing without delays.
Test Environment	• Browsers: Chrome • Operating Systems: Windows 11 • URL: https://e-commerce-lab.onrender.com • Tools: MySql Workbench, Postman, burp suite (API), JUnit5 JIRA or Excel (bug tracking), Selenium (automation). • Emails Testing (Forget Password, 2fa emails) will be locally.

Risk Management	Identified Risks: • Admin pages being accessible to regular users by mistake • Order details (price or product name) not being saved correctly at the time of purchase • Coupons or gift cards applying incorrect amounts at checkout • Deleted products still appearing in the store • Verify order records immediately after checkout to confirm data accuracy • Run a full regression test after every update to catch unexpected side effects
Schedule	Timeline: • Test Planning: Mar 25 - Mar 28 • Test Case Design: Mar 29 - Apr 2 • Functional Testing: Apr 2 - Apr 15 • Test Reporting: Apr 15 - Apr 20
Roles and Responsibilities	• Test Engineers: Perform test case execution and bug reporting QC Team: • Shrouk Magdy Ghonemy • Sahar Mohamed Abdelkader • Esraa Hamed Mahmoud • Ahmed Sayed Sayed • Ahmed Hassan Mohamed • Heba Salah Matrawii

Entry and Exit Criteria	Entry Criteria: • Functional requirements are clearly defined. • Website is deployed and accessible. • Test environment is ready. Exit Criteria: • All test cases executed. • All critical and major defects resolved. • Test summary report prepared.
